

# I See! System

Kristin Hermann  
Jon Koehler  
Rung-Yu Tseng

Fall 2007

# Problem & Principle

## Problem:

- In the healthcare system there is limited access to information that patients and families need.
- Children are often scared and anxious about undergoing medical procedures.
- Child Life Specialist and kid-friendly materials are not always available.

## Principle:

- Create an information system for the pediatric healthcare system that is fun, interactive, and age-specific that will:
  - Inform
  - Set Expectations
  - Educate
  - Ease Anxiety

# Welcome to Radiology

- The I See! System is an interactive, mobile touch-screen computer that offers:
  - Multi-lingual and age specific materials
  - Introduction videos
  - Games
  - Key words
  - Parent's information
- The I See! System was developed in collaboration with Child Life Specialist.

# Future

- Mobile
  - Ability to move from room to room
  - Easily controlled by the patient
- Multiple Applications
  - Used in all departments of the hospital
- Remote Access
  - Ability to access from home via the internet.
